

Method and Program for Visitor Pass System

ABSTRACT

In one aspect of the present invention, a visitor pass system, visitor pass method and visitor pass program which can minimize and expedite visitor formalities, is provided. The visitor pass system comprises a visitor terminal, server and staff terminals. The visitor terminal, the server and the staff terminals are connected via a communication network. The visitor terminal may be placed at a reception area, for instance. The server is preferably a computer which can store a large number of visit data information.
